

OPEN NEIGHBORHOOD/MATH TABLE OPENER

A mathematical love story

$$y = m_2 \cdot x$$

Wes Cain, ADUS Harvard University

Once upon a time, a clever young physics student with a penchant for geometry shared a curious mathematical observation with her friends. Little did she know that her work would fan the flames of development for a rather new mathematical sub-discipline. Ultimately, it would lead her on a journey across three continents, complete with triumphs, turmoil, excitement, mathematics and, most importantly, love.

THIS TALK WILL BE ACCESSIBLE TO ALL UNDERGRADUATE STUDENTS

Tues, Sept 3rd at 5.30 pm
in SC 507 (dinner will be provided)
